

REMOTE PAIRING INSTRUCTIONS

Taranis Q X7 Remote

With the remote on, tap the button with the 3 lines to get into the main menu. (NOTE: do not hold the button or you will be in another menu)

This page is the model select screen. Verify that you are on the correct model for your boat. In this case, just as you see on the screen.

From here tap the page button once to get into the setup menu (2/12). Scroll down (using the knob on the right) until you see the "Reg" option.

Once there, press on the center of the knob one time and a new menu will pop up.

Find the Archer R4 receivers in the boat by following the white, red, and black wire set from the ESC. The left side will be plugged into channel 1 the right side will be channel 2. To bind the process must be started on the right pontoon.

On the Archer R4 there is a small switch next to the LEDs. Use a small object to press this switch down and turn the pontoon on. After a few seconds you will see this screen on the remote.

After selecting enter a success screen will pop up and the receiver will also show a light sequence once registered

Select the enter option and turn off the pontoon. Next go down to the "BND" option for "Reciever1" on the remote and select it using the knob.

(Note: The right pontoon uses "Reciever1" while the left will use "Reciever2") A page will pop up indicating the remote is waiting to see the receiver.

Turn the pontoon on and the page will change, when prompted select the R4 option.

With that done the pairing is now complete and there will be a solid green light on the receiver.

The process can now be repeated for the left pontoon. There is one important note, when binding the second receiver, the "Receiver2" option is used.
